Bridgeport Milling Machine Parts Diagrams Series 1J and 2J

Milling is the process of machining using rotary cutters to remove material by advancing a cutter into a workpiece. This may be done varying direction on one or several axes, cutter head speed, and pressure. Milling covers a wide variety of different operations and machines, on scales from small individual parts to large, heavy-duty gang milling operations.

Any CNC Milling Machine can be used as a CNC Engraving Machine. Some are better at it than others. One of the issues that will determine how good a CNC Machine is for engraving is the maximum spindle speed. Engraving Tools tend to be quite small in diameter and a lot of the materials being engraved are quite soft.

American Machine Tools Company: Metalworking Machinery Sales

Explanation. Machine tool operators must be able to install or remove tool bits quickly and easily. A lathe, for example, has a rotating spindle in its headstock, to which one may want to mount a spur drive or work in a collet. Another example is a drill press, to which an operator may want to mount a bit directly, or using a drill chuck.. Virtually all milling machines, from the oldest manual ...
