Mesh analysis (or the mesh current method) is a method that is used to solve planar circuits for the currents (and indirectly the voltages) at any place in the electrical circuit. Planar circuits are circuits that can be drawn on a plane surface with no wires crossing each other. A more general technique, called loop analysis (with the corresponding network variables called loop currents) can ...

Cognitive science is the interdisciplinary, scientific study of the mind and its processes. It examines the nature, the tasks, and the functions of cognition (in a broad sense). Cognitive scientists study intelligence and behavior, with a focus on how nervous systems represent, process, and transform information. Mental faculties of concern to cognitive scientists include language, perception ...

OK, so with that, let me go on to talking about method one of circuit analysis. This is called the basic KVL KCL method. So just based on those two simple algebraic relations, I can analyze very interesting and complicated circuits. The method goes as follows. So, let's say our goal is, given a circuit like this, our goal is to solve

In computing, a denial-of-service attack (DoS attack) is a cyber-attack in which the perpetrator seeks to make a machine or network resource unavailable to its intended users by temporarily or indefinitely disrupting services of a host connected to the Internet. Denial of service is typically accomplished by flooding the targeted machine or resource with superfluous requests in an attempt to ...

Thevenin theorem is very a very handy tool in simplification of large electrical circuit analysis. A complex original circuit may be replaced by an independent voltage source and a two resistor; first load resistor which changes frequently and Thevenin Resistance, the remaining circuit resistance, both in series.

It is essential that you have a ground in your circuit. Choosing a simulation: Click on the Simulate button on the tool bar or use the "Simulate/Edit Simulation Cmd" command. Enable whatever type(s) of analysis you want using the Edit Simulation Command window. The last one you choose is the one which will be done when you simulate.
