Making Karyotypes Chapter 14

Karyotyping is the process by which photographs of chromosomes are taken in order to determine the chromosome complement of an individual, including the number of chromosomes and any abnormalities. The term karyotype is also used for the complete set of chromosomes in a species or in an individual organism and for a test that detects this complement or measures the number.

XX male syndrome, also known as de la Chapelle syndrome, is a rare congenital intersex condition in which an individual with a 46, XX karyotype (otherwise associated with females) has phenotypically male characteristics that can vary among cases. Synonyms include 46,XX testicular difference of sex development (46,XX DSD), 46,XX sex reversal, nonsyndromic 46,XX testicular DSD, and XX sex reversal.

XX male syndrome - Wikipedia

If a particular operon encodes enzymes for making an essential amino acid and is regulated like the trp operon, then A) the amino acid inactivates the repressor. B) the enzymes produced are called inducible enzymes. C) the repressor is active in the absence of the amino acid. D) the amino acid acts as a corepressor.

Biology Ch. 18 Flashcards | Quizlet

Sex is either of two divisions, typically male or female, into which organisms that propagate their species through sexual reproduction are divided. Most plants and almost all animals employ sexual reproduction. Animals are usually mobile and seek out a partner of the opposite sex for mating. Animals that mate in water can use external fertilization, whereas most land-based animals, such as ...

The process of cell respiration is considered in detail in Chapter 14. Mitochondria contain their own DNA and reproduce by dividing. Because they resemble bacteria in so many ways, they are thought to derive from bacteria that were engulfed by some ancestor of present-day eukaryotic Figure 1-17 Mitochondria can vary in shape and size.
