In classical mechanics, Newton's laws of motion are three laws that describe the relationship between the motion of an object and the forces acting on it. The first law states that an object either remains at rest or continues to move at a constant velocity, unless it is acted upon by an external force. The second law states that the rate of change of momentum of an object is directly ...

Conhecida como princípio da inércia, [3] a primeira lei de Newton afirma que: se a força resultante (o vetor soma de todas as forças que agem em um objeto) é nula, logo a velocidade do objeto é constante. Consequentemente: Um objeto que está em repouso ficará em repouso a não ser que uma força resultante não nula aja sobre ele.
